

House Engrossed

maternal mental health awareness month

State of Arizona  
House of Representatives  
Fifty-fifth Legislature  
Second Regular Session  
2022

# **HOUSE RESOLUTION 2014**

A RESOLUTION

PROCLAIMING MAY 2022 AS MATERNAL MENTAL HEALTH AWARENESS MONTH IN ARIZONA.

(TEXT OF BILL BEGINS ON NEXT PAGE)

1       Whereas, maternal depression is the most common complication of  
2 pregnancy. Maternal mental health disorders encompass a range of  
3 perinatal mental health conditions, such as depression, anxiety and  
4 postpartum psychosis; and

5       Whereas, maternal mental health disorders affect one in five women  
6 during or after pregnancy, but all women are at risk of suffering from  
7 maternal mental health disorders. One in nine Arizonan mothers suffers  
8 from pregnancy-related depression; and

9       Whereas, the symptoms of perinatal mental health conditions can  
10 include anxiety, feeling overwhelmed, guilt, irritability, anger,  
11 difficulty sleeping, feeling disconnected from one's baby and frightening  
12 and intrusive thoughts; and

13      Whereas, fewer than 15% of identified cases of maternal mental  
14 health disorders are treated as a result of personal, structural and  
15 systemic barriers within the health care system. Untreated maternal  
16 mental health disorders significantly and negatively impact the short-term  
17 and long-term health and well-being of affected women and their children;  
18 and

19      Whereas, maternal depression and anxiety affect a woman's ability to  
20 care for herself and engage in healthy parenting behaviors. Maternal  
21 depression and anxiety affect parent-child bonding, increase family  
22 conflict, lower rates of breastfeeding and can lead to less safe home  
23 environments for children; and

24      Whereas, children of affected mothers are at increased risk for  
25 serious health, developmental or behavioral conditions, which can affect  
26 their overall development and growth; and

27      Whereas, despite the prevalence and risks, there is a lack of  
28 awareness of maternal mental health disorders among the public and  
29 providers, and many mothers feel reluctant to report symptoms and  
30 concerns; and

31      Whereas, evidence-based, cost-effective screening, detection and  
32 treatment options are available for mothers and children, but they are not  
33 adequately or consistently applied in Arizona; and

34      Whereas, untreated maternal mental health disorders cause adverse  
35 birth outcomes, impaired maternal-infant bonding, poor infant growth,  
36 childhood emotional and behavioral problems and significant medical and  
37 economic costs, and contribute to more than 25% of maternal  
38 pregnancy-related deaths in this state; and

39      Whereas, the lack of understanding and social stigma of maternal  
40 mental health disorders prevent women and families from understanding the  
41 signs, symptoms and risks involved with maternal mental health and  
42 disproportionately affect women who lack access to social support  
43 networks.

44 Therefore

45 Be it resolved by the House of Representatives of the State of Arizona:

46      That the Members of the House of Representatives proclaim May 2022  
47 as Maternal Mental Health Awareness Month in Arizona.
